

Antibody Engineering for the Development of Cancer Therapeutics

Drs. E. Sally Ward and Raimund J. Ober supervise laboratories at Texas A&M Health Sciences Center/Texas A&M University. Positions are supported by funds from the Cancer Prevention and Research Institute of Texas (www.cpr.it.state.tx.us) and NIH. Postdoctoral appointees work on projects involving the use of antibody engineering approaches to develop therapeutics for cancer that target growth factor receptors and exposed phosphatidylserine (PS). These studies will use a combination of advanced fluorescence microscopy, and *in vitro* and *in vivo* studies in mice to analyze therapeutic efficacy.

These projects have direct relevance to the rapidly expanding use of antibodies in the biopharma industry.

For more information on the research carried out in the laboratory see www.wardoberlab.com.

For inquiries please send materials (full resume, statement of interest, transcripts, and three references) to:
